

# HARMONY™ Series

Prevents voltage flat-topping caused by non-linear loads

Reduces upstream harmonic currents

Eliminates transformer overheating and high operating temperatures

Eliminates primary winding circulating current

Saves energy by reducing harmonic losses

Maintains high energy efficiency even under severe non-linear loading conditions

Electrostatic shielding for high frequency noise attenuation

Lowers voltage distortion to prevent premature equipment failure

Restores ride-through capability of computer equipment

Treats power quality harmonic issues which K-rated transformers do not address

Suitable for high K-factor loads without increasing in-rush current

Reduces current distortion at UPS, generator or Utility service

Improves Power Factor

Optional NEMA TP-1 models meet EnergyStar® and EcoLogo™ requirements

Helps meet IEEE Standard 519 harmonic limits

## Harmonic Mitigating Transformers

*Energy Efficient, Harmonic Mitigating Transformers with zero sequence flux cancellation technology specifically designed to treat the harmonics generated by computer equipment and other non-linear, power electronic loads.*

### HARMONY-1™

Superior to K-rated and conventional transformers in reducing voltage distortion (flat-topping) and power losses due to current harmonics created by single-phase, non-linear loads such as computer equipment. Secondary windings arranged to cancel zero sequence fluxes and eliminate primary winding circulating currents. Treats triplen harmonics (3rd, 9th and 15th) within the secondary windings and 5th and 7th harmonics upstream.

### HARMONY-2™ (patented)

Dual output, phase shifting HMT provides extremely low output voltage distortion and input current distortion even under severe non-linear loading conditions (Data Centers, Internet Service Providers, Telecom Sites, Broadcasting Studios, etc.). Combining zero sequence flux cancellation with phase shifting treats 3rd, 5th, 7th, 9th, 15th, 17th and 19th harmonics within its secondary windings.

### HARMONY-3™ and -4™ (patented)

Three or four output, phase shifting HMT featuring extremely low output voltage distortion and input current distortion by treating 3rd, 5th, 7th, 9th and other higher order harmonics within its secondary windings.
