

Applications & Benefits of the NCE™ (actual site measurements)

Load profiles are similar at each panel

Current THD = 106% K-factor = 12

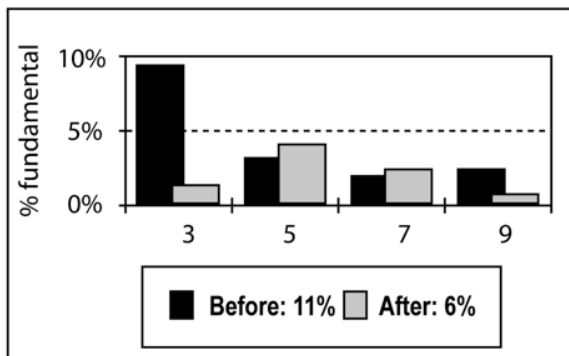

Net Result:

Current THD = 38% K-factor = 5.9

Typical NCE Performance	
Neutral Current	80% reduction
Neutral-Ground Voltage	80% reduction
Load Imbalance	70% reduction
Heaviest Phase Current	10% reduction
K-factor of Load	50% reduction
Voltage Distortion	50% reduction

Effect of NCE™ on Voltage Distortion

Effect of NCE™ on Neutral Current
